EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

- In claim 1, -- (active power – frequency) -- has been added after " $P - \omega$ ";
- In claim 1, -- (reactive power – output voltage) has been added after " $Q - V$ ";
- In claim 7, -- (active power – frequency) -- has been added after " $P - \omega$ ";
- In claim 7, -- (reactive power – output voltage) has been added after " $Q - V$ ";
- In claim 13, -- (active power – frequency) -- has been added after " $P - \omega$ ";
- In claim 13, -- (reactive power – output voltage) has been added after " $Q - V$ ".

This has been added to define the variables used in the claim as defined by the specification.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: Prior art of record does not teach or suggest the simulation of a actual inductor, where the resultant virtual inductor satisfies the droop method as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

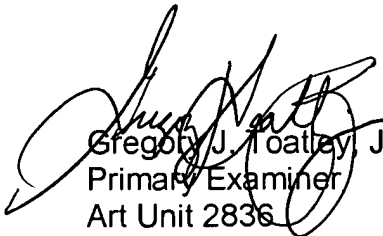

Pertinent Prior Art

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The reference of Chiang et al. "A Frequency-Dependent Droop Scheme for Parallel Control of UPS Inverters" describes the droop method used by the invention of the applicant. The listed references in the PTO-892 form attached teach of various power supply systems that use the droop method.
